

POND-C®

A high stabilized form of vitamin C

POND - C is a highly stabilized form of vitamin C especially developed for AQUACULTURE applications. This stability of POND - C ensures greater bio-availability of vitamin-c

A major part of the conventionally used crystalline forms is leached and oxidised in water and fails to meet the vitamin-c demand of the cultured prawn / fish

Hence, the use of POND - C ensures proper delivery in sufficient quantities to maintain the optimum metabolic and physiological processes of the cultured animals.

APC Nutrients

POND-C®

A high stabilized form of vitamin C

Benefits

POND -C a water soluble yet stable form of vitamin c...

- Ensures high survival and good growth of shrimps / fish
- Maintains uniform size of the cultured animals throughout the crop
- Makes the animals resistant to stress caused by environmental changes like salinity, temperature dissolved oxygen and altered pH levels
- Induces disease resistance, as shrimps remain health and will be less susceptible to infections
- Helps in the formation of collagen - Necessary for growth and proper development of exoskeleton (shell)
- Ensures maximum growth there by, increases bio mass and net profits

Recommended Dosage

1 gm / kg of feed or Aquaculture Consultant As Advised by Aquaculture Consultant

Aqua Feed Supplement
Not for Human Use
Store Under Room Temperature
